                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COMPUTER READBLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC COMPATIBLE

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PStentin Release #1.0, Version #1.25

CURRENT AFPLICATION DATE:

APPLICATION NUMBER: US/07/918,023

FILING DATE: 19920724

CLASSIFICATION STAN:

APPLICATION NUMBER: CH 2247/91

FILING DATE: 26-JUL-1991

ATTONNEY/AGENT INFORMATION:

REGISTRATION NUMBER: LP 1521

TELECOMMUNICATION NUMBER: LP 1521

TELECOMMUNICATION NUMBER: LP 1521

TELECOMMUNICATION NUMBER: SJ.083

REFERENCE/DOCKET NUMBER: LP 1521

TELECOMMUNICATION INFORMATION:

TELEPHONE: (202) 659-2015

TELEEX: 249748

INFORMATION FOR SEQ ID NO: 1:

SEQUENCE CHARACTERISTICS:

LENGTH: 1843 base pairs

TYPE: NUCLEIC ACID

STRANDEDNESS: $11016
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1, Application US/07918023 Patent No. 5427934 GENERAL INFORMATION:

Patent NO. US20020099029A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: NO. US2002009029A1artis AG
TITLE OF INVENTION: Induction of blood vessel formation through administration of TITLE OF INVENTION: polynucleotides encoding sphingosine kinases
FILE REPERENCE: 4-31617
CURRENT APPLICATION NUMBER: US/09/970,516
CURRENT APPLICATION NUMBER: US/09/970,516
CURRENT FILING DATE: 2001-10-04
NUMBER OF SEQ ID NOS: 6
SOCTWARE: PatentIn version 3.1
SEQ ID NO 1155
TYPE: DNA
ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 1155;

Sequence 5. Application US/09970516

Patent No. US20020099029A1

GENERAL INFORMATION:
APPLICANT: No. US20020099029Alartis AG
APPLICANT: No. US20020099029Alartis AG
TITLE OF INVENTION: Induction of blood vessel formation through administration
TITLE OF INVENTION: polynucleotides encoding sphingosine kinases
FILE REFERENCE: 4-31617

CURRENT APPLICATION NUMBER: US/09/970,516

CURRENT FILING DATE: 2001-10-04

NUMBER OF SED ID NOS: 6

NUMBER OF SED ID NOS: 6

SECTION FRANCE: Patentin version 3.1
                                                                                                     ; NAME/KEY: CDS
; LOCATION: (1)..(1149)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and antagonists of HRIP polypeptide. HRIP and its agonist or antagonist decreased or increased expression of functional HRIP. Diseases treated or diagnosed include neurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral meningitis and other developmental disorders, bacterial and viral meningitis and other developmental disorders of the central nervous system, neuromuscular disorders, myasthenia gravis, cell proliferative disorders such as actinic keratosis, arteriosclerosis, atherosclerosis and cancer including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, overy, autoimmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency disorder such as Addison's disease, acquired immunodeficiency disorder such as Addison's disease, acquired immunodeficiency diseases, altergies, bronchitis, diabetes mellitus, rheumatoid arthritis, microbial infection and trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human intracellular phosphorylation regulator polypeptides and polynucleotides for diagnosis, prevention and treatment of neurological, cell proliferative and autoimmune/inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (INCY-) INCYTE PHARM INC.

                           C? The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary cCC to the complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises a sequence complementary to the CC complementary strand of a polynucleotide which comprises a sequence complementary to a complementary strand of a polynucleotide which comprises a pend sequence complementary to a CC oligonucleotide comprises a least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence, where the CC oligonucleotide comprises a least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, comprises and be useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for the ccc particularly full-length cDNAs. The primers are also useful for ANH1362B and CC ANH3633 to ANH3642 represent human cDNA sequences; ANB92446 to ANH3632 confidence of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB93955 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-JUL-1999; 99JP-0248036.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Plasmid DNA from the normalized library NCT_CGAP_Kid5 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1933912-1325831, 1471368-1472903 and 1492104-1493255). Subtraction by Bento Soares and M. Fatima Bonaldo. "

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A

                         salivary gland. It was constructed according to the procedure described by Bonaldo, Lennon & Soares (Genome Research Genome 6: 791-806, 1996). For construction of the CNI library, plasmid DNA from the pool of normalized libraries was electroporated into competent bacteria for the production of single-stranded circular DNA. This was then used as a tracer in a subtractive hybridization with
